Dear Chris,

After receiving your message we've taken a closer look and saw that a script is simply showing domeinnaam except when a specific domain name is added. Our client is not actually doing something wrong. I'll try to clarify.

If you go to <https://www.autentiek.nl/reserved.php?site=drschriscjacobs.nl> you see the added domain name as the claimed property.

When you simply go to <https://www.autentiek.nl/reserved.php> you can see just the name Autentiek.

Every domain name that is added to ?site= is shown on the page.

For instance ours: <https://www.autentiek.nl/reserved.php?site=alphamega.nl>

Or even Google: <https://www.autentiek.nl/reserved.php?site=google.com>

So it's just what the visitor fills in. The owner is not claiming your domain name.

I hope we were able to reassure you.

Kind regards,

Ellen van de Greef

Alphamega
